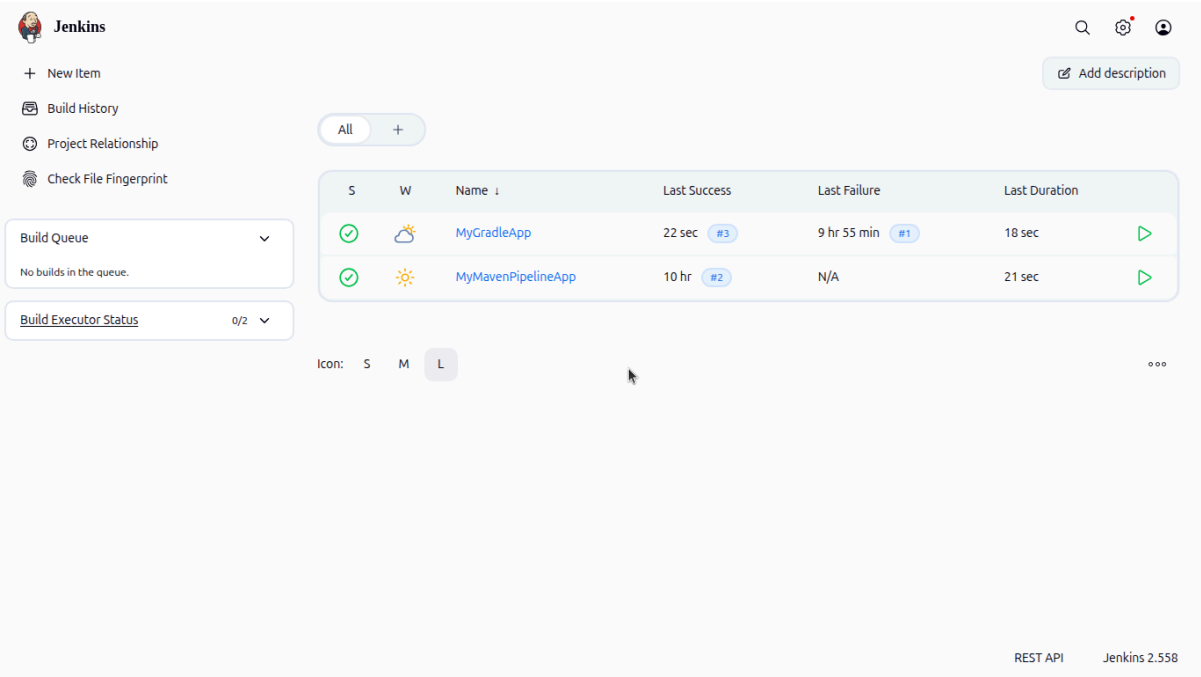
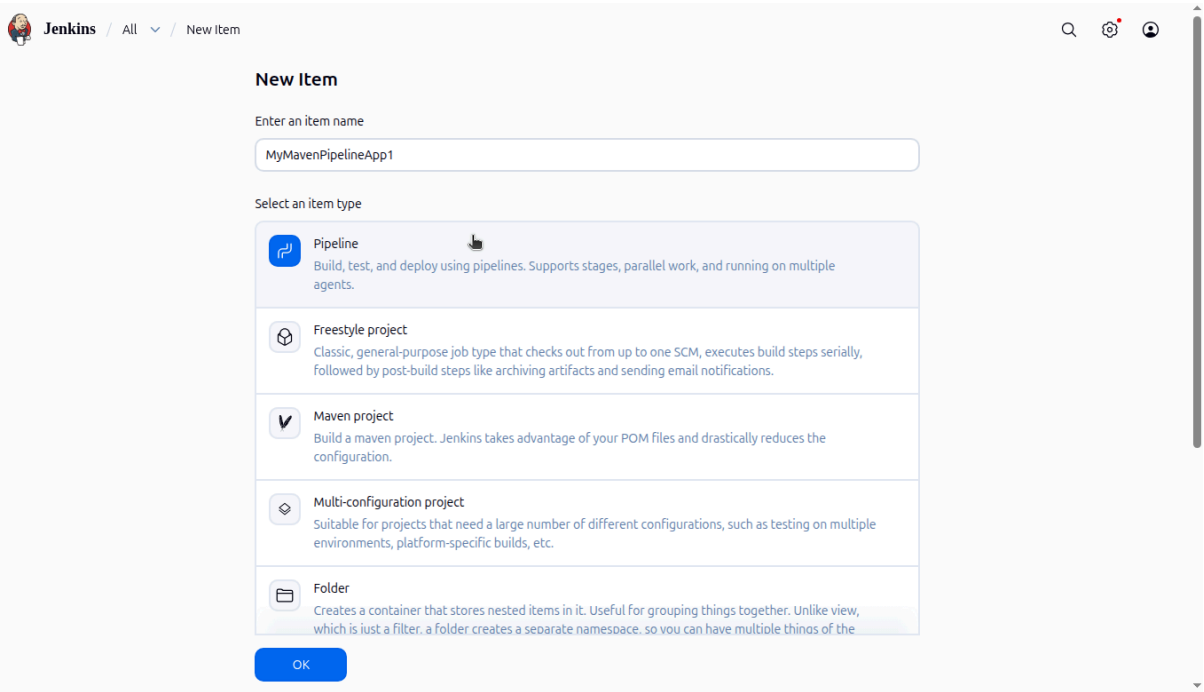
Jenkins Pipeline for MyGradleApp

Step 1: Open the Jenkins Dashboard in order to create a new item

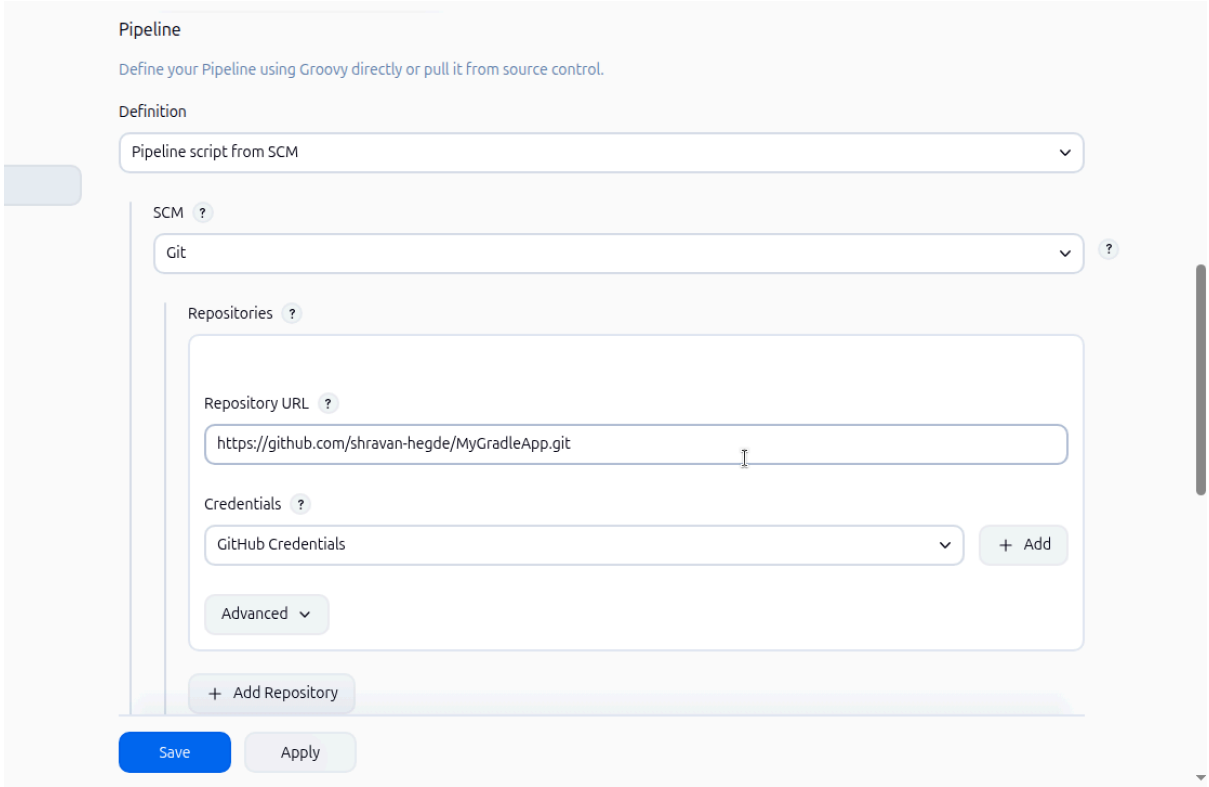


Step 2: Click on New Item in order for creating an New Item and thus give the name as "MyGradleApp" and Item type as Pipeline and

Create it



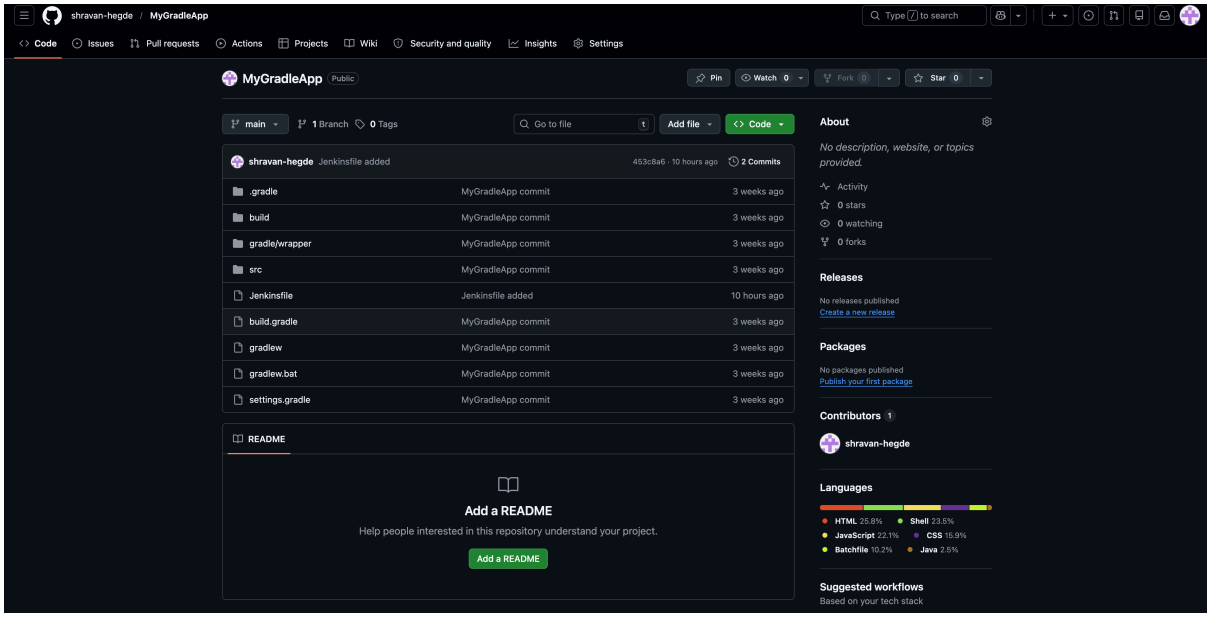
Step 3: Configure the settings by Defining the script as “Pipeline Script from SCM” and SCM as “Git”. Thus, now as we have selected Git, we need to paste the Repository URL of the project given in GitHub and choose Credentials as “GitHub Credentials” which was created earlier.

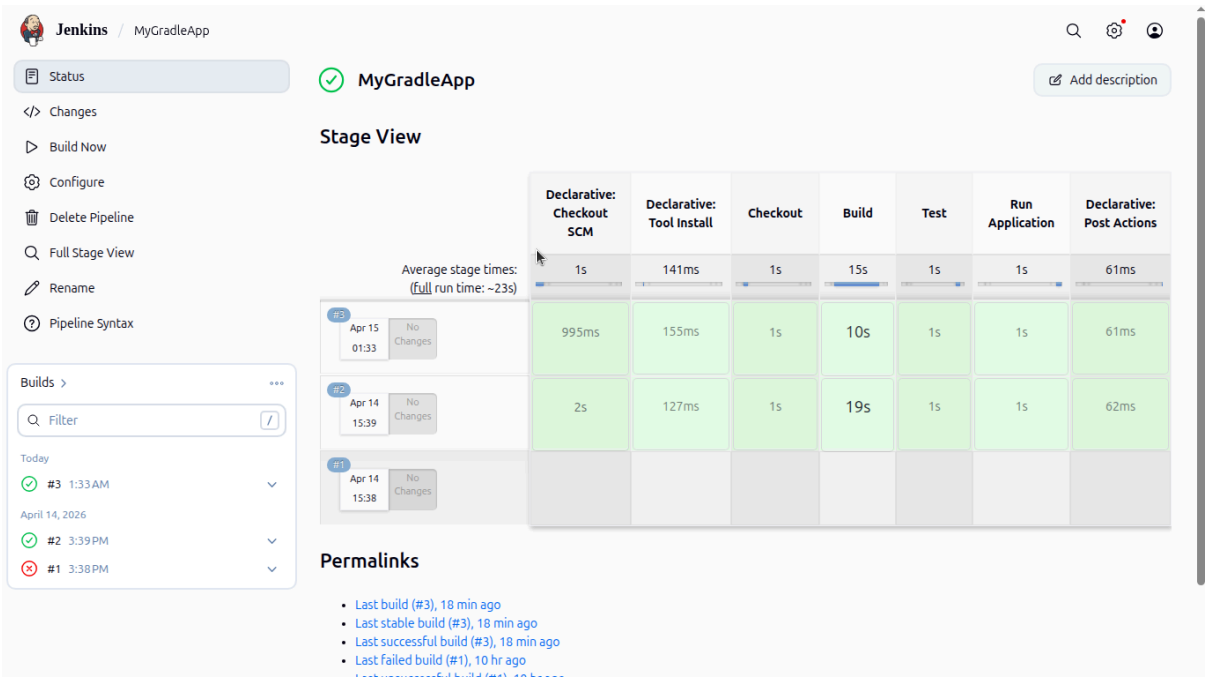


Step 4: Paste the available code inside the Jenkinsfile

```
pipeline {
 agent any // Use any available agent
 tools {
 gradle 'Gradle' // Ensure this matches the name configured in Jenkins
 jdk 'JDK'
 }
 stages {
 stage('Checkout') {
 steps {
 git branch: 'main', url: 'https://github.com/shravan-hegde/MyGradleApp.git'
 }
 }
 stage('Build') {
 steps {
 sh 'gradle build' // Run Gradle build
 }
 }
 stage('Test') {
 steps {
 sh 'gradle test' // Run unit tests
 }
 }
 stage('Run Application') {
 steps {
 // Start the JAR application
 sh 'gradle run'
 }
 }
 }
 post {
 success {
 echo 'Build and deployment successful!'
 }
 failure {
 echo 'Build failed!'
 }
```

Step 5: Now we need to Push changes and commit by pushing the necessary "Jenkinsfile" to the respective Repo





Step 6: Now go to Jenkins and Build the Pipeline and thus check the Stage view for the successful execution.
